

Westchester Regional EMS Council

REMAC ADVISORY Pharmaceutical Shortage Update

Issued: July 15, 2010

The Westchester Regional Emergency Medical Advisory Committee (REMAC) has received additional notification from the New York State Department of Health, Bureau of EMS regarding the continuing shortage of pharmaceuticals commonly found in the pre-hospital care environment. To better understand the potential and real affects on the EMS system, the Bureau has asked for feedback from all REMAC members, ALS agency medical directors, and ALS agency operations officers via Regional EMS offices.

ALS services are advised to communicate with their medical directors, supplying hospital pharmacies and/or vendors to review current inventories and contingency plans. Notification of critical medication shortfalls should be made to the Regional EMS office by calling (914) 231-1616 as soon as possible so that REMAC may institute any needed protocol modifications.

Enclosed are the following items relevant to the situation:

- Letter from the NYSDOH dated June 10, 2010
- Pharmaceutical back order matrix

Additional information regarding specific medication shortages may be found at the FDA website for drug shortages:

<http://www.fda.gov/Drugs/DrugSafety/DrugShortages/ucm050792.htm>

Please refer all questions regarding this advisory to the Regional EMS office. Thank you for your attention to this matter.

Re: Shortage of Pharmaceuticals

Dear Chairs:

The Department has been contacted by several agencies that are experiencing severe difficulty with restocking their pharmaceutical supplies. Hospira Inc. is a sole source manufacturer for many of the medications routinely used by the EMS system. According to the FDA Current Drug Shortage web page (see resources below), this is due to increased demand and most are predicted to be resupplied throughout June or July.

Since Hospira, Inc. is a sole source manufacturer, all vendors may have their stock severely impacted and on back order for a new supply. This impacts the entire healthcare community.

The Department is strongly recommending that you monitor this issue within your respective Regional Emergency Medical Advisory Committee (REMAC) and consider developing alternative plans in the event that supplies become critically low or exhausted.

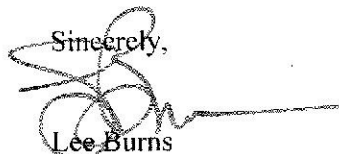

FDA web page listing current drug shortages:

<http://www.fda.gov/Drugs/DrugSafety/DrugShortages/ucm050792.htm>

Planning considerations:

1. Compare your formulary with the FDA list to determine what effect this may have with your protocols and patient care.
2. If EMS Agencies within your region routinely resupply medications used during patient care from the destination hospital, survey your regional hospitals to determine if resupplying medications will be affected.
3. Identify and consider temporarily replacing affected medications with alternative medications or therapies that are readily available.
4. If a regional formulary change is required, submit a letter to the Bureau of EMS with the changes requested for emergent review and consideration.

Sincerely,

Lee Burns

Acting Director

Bureau of Emergency Medical Services
